Jaewoo**Kim**
M.S. with Thesis in Computer Science

Education

| 2018 - 2020 | **Master of Science: Computer Science** | Univ. of Illinois at Urbana-Champaign |

GPA: 4.00/4.00
Advisor: Prof. Aditya Parameswaran

| 2012 - 2018 | **Bachelor of Science: Computer Science** | Univ. of Illinois at Urbana-Champaign |

GPA: 3.84/4.00
Undergraduate Thesis: "Exploring Meaningful Scatterplots using Zenvisage"

Experience

08/18 - Now Graduate Teaching Assistant: Data Structures(CS 225)
- Graduate Teaching Assistant for largest undergraduate course in the university.
- Leading 80 students through programming exercise to solidify their knowledge of data structures.
- Contributed to course development by improving course material.

01/17 - Now Research Assistant: Project Zenvisage
- Zenvisage is a data visualization tool that automatically identifies and recommends visualizations that match desired user patterns.
- Utilized Angular.js and D3.js to dynamically visualize data.
- Developed dynamic faceting features which bucket data into categories set on the fly.
- Currently researching and developing new data analysis method for scatterplots.

05/17 - 09/17 Research Assistant: Project Entity Search
- Implemented Entity Search, which provides a framework for building an entity-enabled index on top of Apache Lucene for searching specific objects rather than documents.

Projects

Web Crawler
- Implemented a web crawler in python to extract movie and actor information from Wikipedia pages.

Recipe Finder
- Implemented an ios app using React Native which supports search of ingredients and recipes using Edamam database api. App keeps track of nutritional information for each user with firebase.

Noisy Image Recovery
- A machine learning project for recovering noisy MNIST images using Boltzmann machine model and mean field inference.

Teammatcher WebApp
- Implemented a recommender system to recommend students with academic projects based on mined data of their interests and past work.
